

LECTURES ON TROPICAL METEOROLOGY

Roger K. Smith

with a contribution from Sarah C. Jones

Contents

1	INTRODUCTION TO THE TROPICS	3
1.1	The zonal mean circulation	4
1.2	Data network in the Tropics	8
1.3	Field Experiments	11
1.4	Macroscale circulations	12
1.5	More on the Walker Circulation	18
1.6	El Niño and the Southern Oscillation	19
1.7	The Madden-Julian/Intraseasonal Oscillation	24
1.8	More on Monsoons	28
1.8.1	The Regional Theory	28
1.8.2	The Planetary Theory	28
1.9	Monsoon variability	30
1.10	Synoptic-scale disturbances	30
2	EQUATIONS AND SCALING AT LOW LATITUDES	36
2.1	The governing equations on a sphere	36
2.2	The hydrostatic equation at low latitudes	38
2.3	Scaling at low latitudes	41
2.4	Diabatic effects, radiative cooling	43
2.5	Some further notes on the scaling at low latitudes	48
2.6	The weak temperature gradient approximation	49
3	MORE ON DIABATIC PROCESSES	51
4	THE HADLEY CIRCULATION	59
4.1	The Held-Hou Model of the Hadley Circulation.	60
4.2	Extensions to the Held-Hou Model	64
5	WAVES AT LOW LATITUDES	73
5.1	The equatorial beta-plane approximation	78
5.2	The Kelvin Wave	79

<i>CONTENTS</i>	2
5.3 Equatorial Gravity Waves	80
5.4 Equatorial Rossby Waves	81
5.5 The mixed Rossby-gravity wave	81
5.6 The planetary wave motions	86
5.7 Baroclinic motions in low latitudes	88
6 Forced Equatorial Waves	97
6.1 Response to steady forcing	97
A The parabolic cylinder function	100
