

CPT flowchart

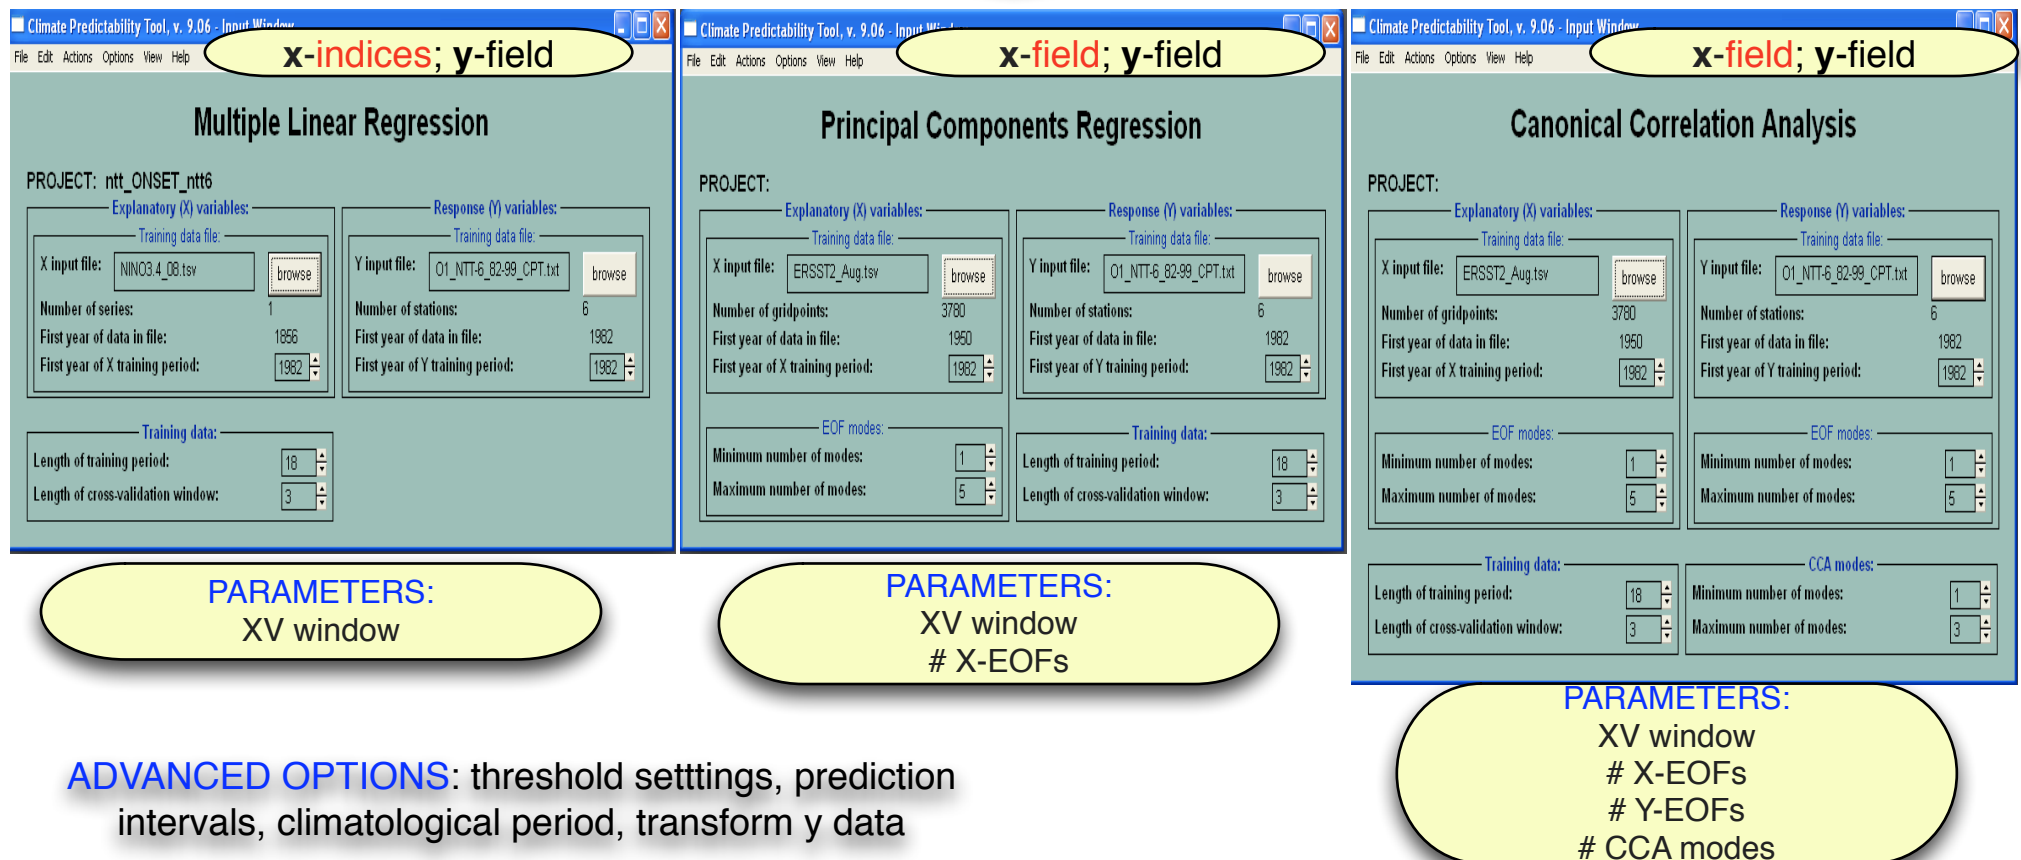

SELECT TRAINING DATA:

x: predictor set

y: predictand set

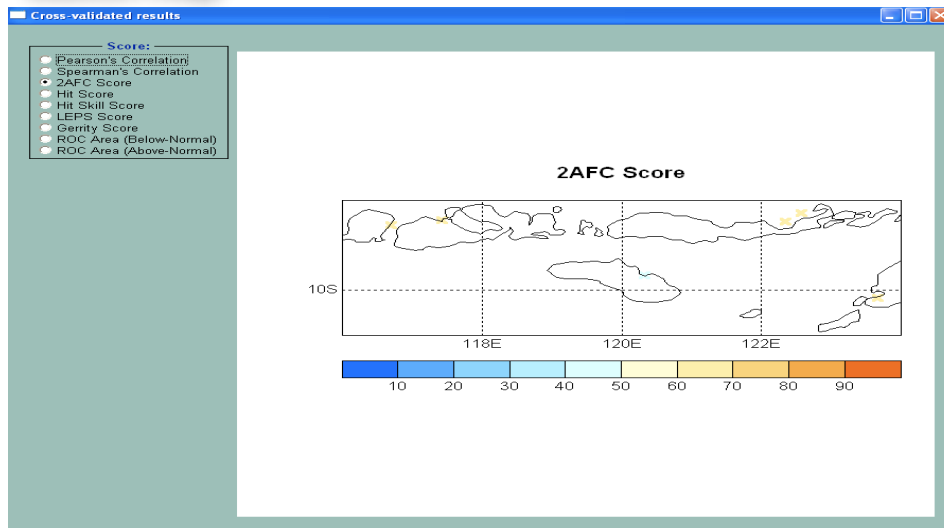

select variables & spatial domains
(x & y have same number of years)

CHOOSE & TRAIN MODEL

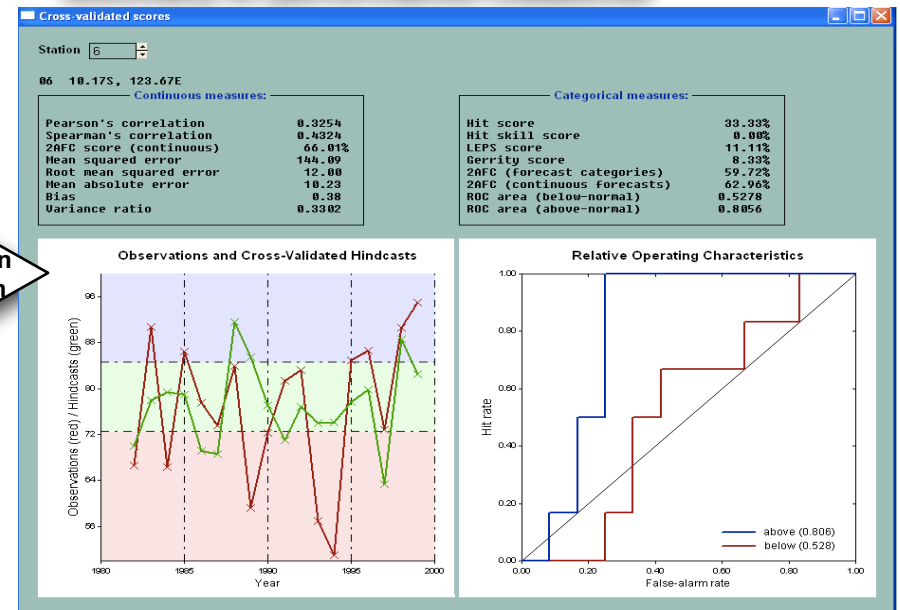

VALIDATE MODEL (under cross-validation)

station map

choose score type for map via radio button

summary of performance measures

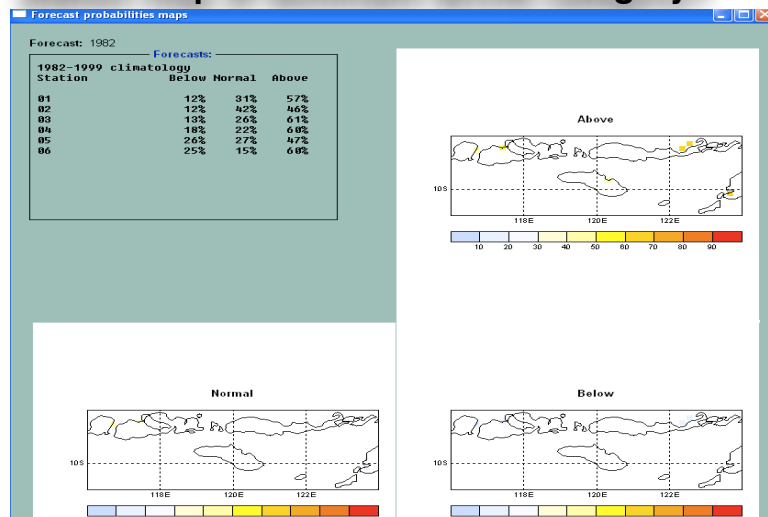

click on
station

(batch-mode CPT outputs are generally dumped to set of ascii files,
although I'm not sure about the by-station summaries)

MAKE
FORECAST
based on model

SELECT FORECAST INPUT DATA:
xf: forecast data set
(same variable/spatial domain as for training)

station map of dominant tercile category?

click on
station
